

## Correcting parts in .CSV file (CHANGE MEIRA PART TO ROCKNEL PART)

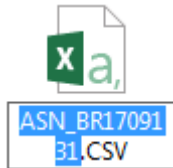

Outside sales will send in a CSV file. If done correctly by outside sales all parts inside the .csv file will be ROCKNEL part numbers rather than MEIRA part numbers. On occasion MEIRA part numbers have made their way onto this file rather than the ROCKNEL part numbers. This script shown below will fix it when ran:

Here is how to run the script:

- 1.) Select your file and copy the Name:

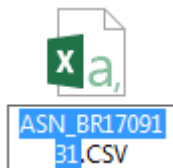

- 2.) Rename the file to "LOAD.CSV"

- 3.) Run the file "CHANGE\_MEIRA\_TO\_ROCKNEL.AHK"

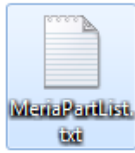

- 4.) Hit CTRL + M (this kicks off the file load)
- 5.) Rename the file that says "LOAD" to whatever the name prior was

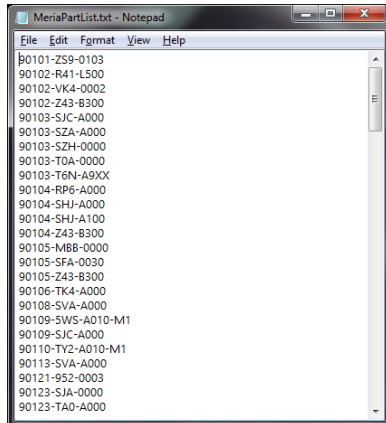

- 6.)

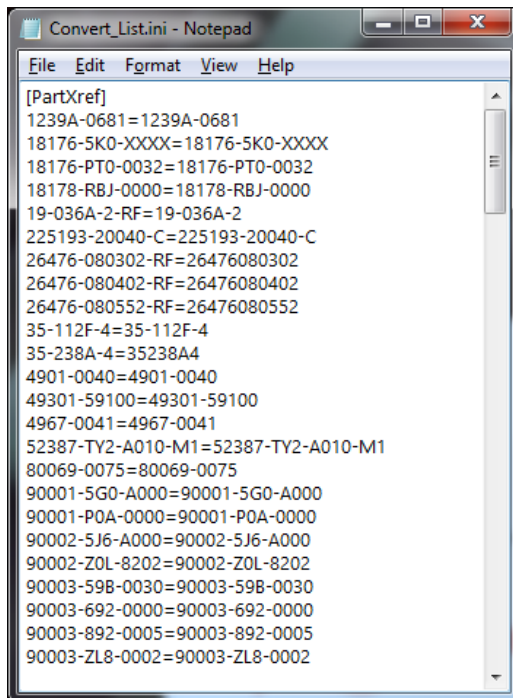

Here is how it works. There is a file called MeriaPartsList.txt

It contains every part MEIRA sends via passthrough.

CHANGE\_MEIRA\_TO\_ROCKNEL.AHK will check every line of LOAD.CSV against each part in this list. If it finds an entry it will cross-reference it in the file "Convert\_List.ini" and replace it.

It's key to note that these two files need to be kept updated if new parts are added in these crossreferences should be kept updated.
